

AT&T Smart Cities: Dublin

“IoT solutions are already generating a measurable value for businesses. And around the world, more cities are realizing the impact IoT solutions can have on making their communities more efficient, sustainable and enjoyable,”

Mike Zeto,
General Manager,
AT&T Smart Cities

AT&T is committed to help build smarter cities – in the U.S. and abroad. We have signed an agreement with IDA Ireland and Dublin City Council to collaborate and exchange information about smart cities solutions.

This initiative will foster an open dialogue of IoT best practices with Ireland and Dublin, which is developing into a leading IoT location. This collaboration will also explore opportunities to work with other organizations on IoT-related development projects across the country, including Dublin’s Docklands IoT project.

Smart cities solutions can offer citizens many benefits in sustainability, transportation, public safety, infrastructure and more.

As part of our smart cities initiative in the U.S., we are currently working with several of our spotlight cities including Dallas, Chicago and Miami-Dade County on projects ranging from water conservation to intelligent lighting to citizen engagement.

“Being smarter will be a defining characteristic of tomorrow’s leading cities. Dublin has the key ingredients and is exploiting them to be at the forefront of smart city developments leveraging our unique cluster of global technology companies, thriving start-ups and research centres,”

Owen P. Keegan,
Chief Executive,
Dublin City Council
