

# Blockchain

**AT&T is combining our edge-to-edge capabilities with blockchain technology to help companies transform the way they conduct business.**

At AT&T, we pride ourselves on maintaining a strong presence at the forefront of emerging technologies. Our unique response to the recent emergence of blockchain technology is to unite with exceptional partners and utilize our existing edge-to-edge services.

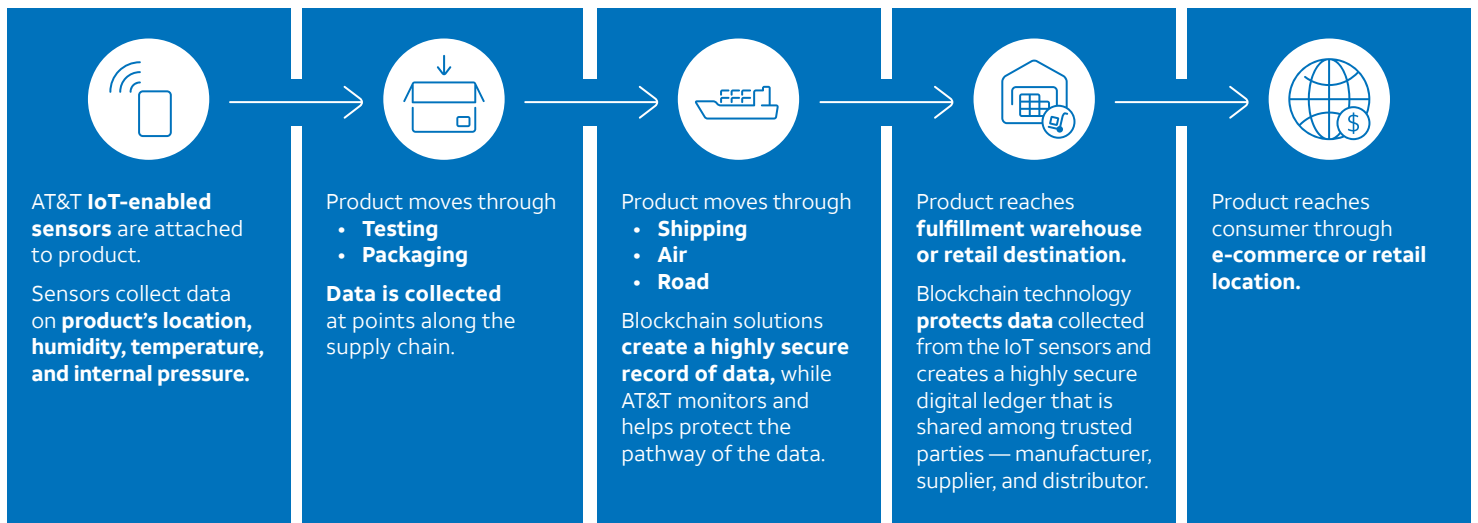

In September, we launched our AT&T suite of blockchain solutions supported by AT&T's Consulting Team.

Many businesses may have difficulty adopting blockchain and trusting that their invaluable data will remain safe in a decentralized ledger. We specialize in protecting data, and provide assurance (as well as education) on the safe and proper usage of emerging technology.

**Learn more about how integrated blockchain solutions can help your business in the infographic below.**

## AT&T Suite of Blockchain Solutions | Monitor and Enhance Quality Through Your Supply Chain

**AT&T can customize solutions for businesses in several industries, such as:**

### Manufacturing

- Supply chain
- Quality control
- Asset/goods management

### Retail

- Supply chain
- Inventory control
- Lot lineage/provenance

### Healthcare

- Record management
- Validation of clinical trials
- Sharing data across external resources
