# AT&T Powers Exide's Digital Transformation

AT&T is powering the digital transformation of Exide, the battery and energy storage company, with AT&T FlexWare. Our flagship network virtualization solution, primed for network edge services, is now in place across Exide locations globally, including throughout Europe, North America, and Asia Pacific.

We're delivering a highly secure future-ready network to Exide. This will allow the business to launch virtualized network functions quickly to improve productivity and communication across its sites, helping over 10,000 employees in 80 countries.

As a leading global provider of stored energy solutions, Exide delivers compelling solutions for the world's current and future power needs. Exide manufactures and recycles batteries for a broad range of industrial and transportation applications, including cars, boats, forklifts, and uninterrupted power units.

## Behind AT&T FlexWare

AT&T FlexWare is one of our core software-centric services from our edge solutions portfolio. Its near real-time service cuts long set up times and complex processes.

AT&T FlexWare at the edge allows Exide to use both highly secure MPLS and internet access services for its network needs. Starting with network routing, Exide is able to access all wide area network components utilizing high bandwidth capabilities to help provide greater flexibility as the needs of each change over time. AT&T FlexWare also allows Exide to fulfill its centralized IT requests centralized without needing local site support.
